

MineralFile

AGELIO NETWORKS

Helping you realize the most from your mineral assets

MANAGE ASSETS USING YOUR WEB BROWSER

Patent-pending MineralFile helps you to efficiently manage assets using a web browser. The result: no software or servers to buy and maintain, no expensive consultants to hire, and access from any Internet connected computer.

IMPORT AND TRACK REVENUE AND EXPENSES

MineralFile facilitates revenue, expense and production information tracking. Using a familiar spreadsheet-type grid, users can enter information from check stubs, join interest bills, view past revenue information in addition to comparing product prices to those of other users in your area. There is also the option to upload revenue and expense data files from third parties including Oildex (CDEX), PDS and others. MineralFile features a consolidated verification report to assist you in ensuring your revenue payments are what they should be.

VERIFY PRODUCTION DATA

Looking to verify and reconcile production information? MineralFile includes an optional add-on that downloads monthly production history and displays it along side information on your check stubs. If there is a discrepancy, MineralFile will automatically highlight it giving you the opportunity to research the issue further.

EASILY SEARCH THROUGH YOUR INFORMATION

Your users will find land and revenue information more accessible than ever before. You can search for information throughout your MineralFile account as easily as using an Internet search engine. All land and revenue-related documents can be scanned and stored along with your assets in the system. You will never again have to navigate through file boxes. Once your data is entered, you can retrieve and print reports at the push of a button. MineralFile can export reports to many common formats including PDF and Microsoft Excel for outside manipulation.

SIMPLIFY ACQUISITIONS AND DIVESTITURES

If your organization buys and sells assets such as leases or mineral rights, MineralFile can help reduce the costs of these transactions by facilitating the transfer of data from one organization to another. For sellers, this can be an attractive sales tool, helping you maximize the value of your interests. For buyers, this means lower acquisition costs and less time before the information about your purchases is available and usable.

All information in MineralFile is kept secure, backed up nightly and accessible only to users you designate.
